BeardedEagle

CERTIFIED PRODUCT OWNER™

Certified Scrum Product Owner Workshop teaches you the essentials of working as a Product Owner in this interactive, certified, two-day class. It provides the skills and tools you need to generate business value and fully leverage your Scrum team.

All CSM courses are taught by Certified Scrum Trainers. Following successful completion of the course, each participant will be designated as a Certified Scrum Product Owner. This certification includes a one-year membership to the Scrum Alliance, where additional member-only material and information are available. This course also satisfies two elements of the CSD track: Scrum Introduction and Elective.

Why this Course?

Scrum is an innovative approach to getting work done. Scrum, the leading and fastest-growing of the Agile practices, is a framework for effective team collaboration on complex projects. Its holistic approach provides a small set of rules which create just enough structure for cross-functional teams to focus their efforts on solving what might otherwise be insurmountable challenges. Scrum was originally formalized for software development projects, but works well for any complex, innovative scope of work.

No matter what your background or industry is, BeardedEagle Certified Product Owner workshop training is a great way to get a strong start in how to drive and manage Scrum Projects. Even experienced Agile practitioners will benefit from the highly experiential simulations and "big picture" perspective provided by BeardedEagle Scrum trainers, who are thought leaders in the Agile community and certified by the Scrum Alliance.

Scrum training benefits everyone on the team and gives them tools they can immediately use to accelerate team-building while they master the art and science of incremental delivery. You will discover the keys to planning a Scrum project , managing a product backlog coordinating with the Scrum Team. You will be taught techniques and practices that are used by thousands of successful Agile teams throughout the world, you'll become versed in the practical steps you can take to form a high-performance team and how to successfully avoid the pitfalls that new Agile teams often encounter.

What you will learn

- Practical , project-proven practices
- How to write user stories for the product backlog
- Proven techniques for prioritizing the product backlog
- How to predict the delivery date of a project (or the features that will be complete by given date) using velocity
- Tips for managing the key variables influencing project success

Who should attend?

This course is intended for those who wish to explore the benefits that agile and Scrum and who desire a foundational education in agile and in Scrum, including its values, principles and practices, and those who enjoy a learning format that is hands-on, experiential and Socratic. Attendees will utilize a variety of exercises, activities, discussions and resources to help them learn and apply Scrum in both software and non-software product development situations.

Other Benefits?

PMP's: 15 Professional Development Units (PDUs).
